Dear Sir/Madam,

- ▶ Born and raised in Silicon Valley I have witnessed the tech industry grow and change over the years. From the origins of the internet to Web 2.0 and beyond, I now see myself as someone not just using technology but creating it. My passion for programming is a result of seeing its usefulness and its integration in our ever-changing world.
- ▶ I attended school at San Jose State University and graduated with a Bachelor's degree in History. I then proceeded to learn programming at the Coding Dojo in silicon valley. My first foray into coding was for a rock band that I co-founded to sell merchandise and grow notoriety. I then found a position with Wells Fargo as a Software Developer that was cut short due to the pandemic. I then decided to return as an Instructor to the coding school.
- ▶ I am seeking opportunities in Full Stack Development. I appreciate a dynamic and challenging work environment that offers an opportunity to grow with the company. Ultimately, I would like to become a Senior Engineer and oversee projects from inspiration to completion.

Sincerely,
Joshua Venegas
